

I Claim:

1. A furniture glide for mounting on the terminal end of a furniture leg having an outer surface, comprising:

5 a base having a generally arcuate lower surface for engaging a supporting surface; and

a sleeve extending from the base and defining a cavity for receiving the furniture leg, the sleeve having an adjustable portion for accommodating furniture legs of different dimensions within the cavity.

10

2. The furniture glide of claim 1 wherein the adjustable portion of the sleeve includes a plurality of flexible depressions extending into the cavity, the depressions defining corresponding inner surfaces for engagement with the furniture leg.

15 3. The furniture glide of claim 2 wherein the sleeve terminates at an upper edge and wherein the depressions communicate with the upper edge of the sleeve.

4. The furniture glide of claim 1 wherein the sleeve terminates at an upper edge and includes a plurality of resilient projections extending radially inward from the upper edge for engaging the outer surface of the furniture and retaining the furniture leg in the cavity.

20

5. The furniture glide of claim 1 wherein the base includes:
backing layer having an inner surface directed towards the cavity of the sleeve
25 and an outer surface; and
a felt pad affixed to the outer surface of the backing layer.

25

6. The furniture glide of claim 1 wherein the sleeve is generally tubular and includes an upper edge and a lower edge, the sleeve defined by an inner surface and an outer surface.

30

7. The furniture glide of claim 6 where base includes an outer periphery, the outer periphery of the base being affixed to the inner surface of the sleeve at a location adjacent the lower edge.

5 8. The furniture glide of claim 6 where base includes an outer periphery, the outer periphery of the base being affixed to the outer surface of the sleeve at a location adjacent the lower edge.

10 9. The furniture glide of claim 1 wherein the sleeve includes a plurality of flutes formed therein.

15 10. The furniture glide of claim 9 wherein the sleeve is generally tubular and includes an upper edge and a lower edge, and wherein the plurality of flutes in the sleeve are generally parallel to each other and extend between the upper edge and the lower edge of the sleeve.

11. The furniture glide of claim 10 wherein the lower surface of the base includes a generally flat area for engaging the supporting surface.

20 12. A furniture glide for mounting on a terminal end of a furniture leg having an outer surface, comprising:

a base having a generally arcuate lower surface for engaging a supporting surface and an arcuate inner surface for engagement with the terminal end of the furniture leg; and

25 a sleeve extending from the base and having inner surface defining a cavity for receiving the furniture leg, the sleeve including a leg engagement element for engaging the furniture leg within the cavity.

30 13. The furniture glide of claim 12 wherein the leg engagement element includes a plurality of flexible projections extending into the cavity, the projections engaging the furniture leg received in the cavity.

14. The furniture glide of claim 13 wherein the sleeve terminates at an upper edge and wherein the projections intersect the upper edge of the sleeve.

5 15. The furniture glide of claim 12 wherein the sleeve terminates at an upper edge and includes a plurality of resilient projections extending radially inward from the upper edge for engaging the outer surface of the furniture and retaining the furniture leg in the cavity.

10 16. The furniture glide of claim 12 wherein the base includes:
backing layer having an inner surface directed towards the cavity of the sleeve
and an outer surface; and
a felt pad affixed to the outer surface of the backing layer.

15 17. The furniture glide of claim 12 wherein the sleeve is generally tubular and includes an upper edge and a lower edge and wherein the base includes an outer periphery, the outer periphery of the base being affixed to the inner surface of the sleeve at a location adjacent the lower edge.

20 18. The furniture glide of claim 12 wherein the sleeve includes a plurality of flutes formed therein.

19. A furniture glide for mounting on a terminal end of a furniture leg having an outer surface, comprising:

25 a slider having a lower surface for engaging a supporting surface and an inner surface for engagement with the terminal end of the furniture leg; and
a leg connection member interconnected to the slider for retaining the furniture glide on the furniture leg.

30 20. The furniture glide of claim 12 wherein the leg connection member includes a generally tubular sleeve having a plurality of flexible projections projecting

from an inner surface thereof, the projections engaging the furniture leg received in the cavity.

21. The furniture glide of claim 20 wherein the sleeve terminates at an upper
5 edge and wherein the projections intersect the upper edge of the sleeve.

22. The furniture glide of claim 19 wherein the slider includes:
a backing layer having an inner surface for engagement with the furniture leg and
an outer surface; and
10 a pad affixed to the outer surface of the backing layer.

23. The furniture glide of claim 12 wherein the leg connection member is
generally tubular and includes an upper edge and a lower edge and wherein the slider
includes an outer periphery, the outer periphery of the slider being affixed to an inner
15 surface of the leg connection member at a location adjacent the lower edge.

24. The furniture glide of claim 19 wherein the leg connection member
includes a plurality of flutes formed therein.
